Monthind, the clear choice in professional window cleaning

The window cleaning division of Monthind comprises a highly trained team of individuals with specific expertise in this exacting and potentially hazardous area of operations.

Depending on the needs of the application we utilise both traditional and the very latest techniques to gain access and attain a top quality finish on both interior and exterior areas of glass.

All water used and provided is produced onsite at our Colchester and Norwich depots using the reverse osmosis filtration process. This removes all contaminants and minerals from the water and enables us to achieve a smear free finish which can be easily maintained. The system also minimizes the amount of water required to achieve the result and provides the most environmentally sound option.

Professional experienced team

Highly trained team of individuals with specific expertise in this exacting and potentially hazardous area of operations.

Health & Safety

At Monthind we pride ourselves on our rigorous adherence to all aspects of health and safety legislation and best practice. Suitable and sufficient risk assessments, CoSHH assessments and method statements are produced for each site we work on.

We have a written health and safety policy, which identifies our organisational structure, managers' responsibilities and overall arrangements for health and safety. This ensures the health, safety and welfare of all our employees, as well as any other persons that may be affected by our activities.

An honest and transparent approach to every contract

Before we take on any job, we undertake a complete site survey, review the client specifications and submit a written quotation detailing the work to be done.

Methods of Access

- **Reach and Wash** (from ground floor to 6th floor, 3ft – 72ft) including windows, frames, cladding and solar panels
- **Mobile Elevated Work Platforms** – IPAF (International Powered Access Federation) trained platform operators
